**NUCOR SHEET MILL
DIRECTIVE ON THE RESTRICTION OF THE USE OF CERTAIN
HAZARDOUS SUBSTANCES IN ELECTRICAL AND
ELECTRONIC EQUIPMENT 2002/95/EC (RoHS)
DECLARATION**

To whom it may concern:

Nucor is pleased to announce that to the best of our knowledge, the steel substrate produced by all Nucor Sheet Mill Divisions does not exceed the concentration limit in the table below. In addition, none of the hazardous substances in the table below are intentionally introduced to the substrate during the manufacturing process:

Substance	RoHS Limit (by weight in homogeneous material)
Cadmium & Cadmium Compounds	0.01%
Hexavalent Chromium	.1%
Lead & Lead Compounds	.1%
Mercury & Mercury Compounds	.1%
Polybrominated Biphenyls	.1%
Polybrominated Diphenyl Ethers	.1%

This includes all Hot Rolled, Cold Rolled steel products produced at our facilities in Berkeley, SC, Crawfordsville, IN, Decatur, AL and Hickman, AR as well as all CastripTM products. Coated (galvanized and galvaneal) products from all divisions may be produced with Hexavalent Chromium chemical treatment that may not comply with the Directive. If requested to be RoHS compliant, Nucor produces these coated products with a Trivalent Chromium chemical treatment which conforms to the limits listed above.

Sincerely,

Jennifer Hawthorne
Environmental Engineer
